Formula 1 may well be locked and loaded in anticipation of its all-new rules package next year, but the sport is already also well advanced on the stunning project of grand prix cars powered by sensational new eco-fuelled two-stroke engines in its next step towards a far cleaner carbon-neutral future. A bold and thrilling proposal, the new plan plots to see F1 out-green Formula E, while still using internal combustion engines that will scream sweeter than even those incredible V10s of a ...

Two-stroke (or two-cycle) engine is a type of internal combustion engine which completes a power cycle with two strokes (up and down movements) of the piston during only one crankshaft revolution. As the name suggests two stroke engine has only two cycles. Two stroke engine can be of either petrol or diesel type.

The Rolls-Royce Crecy was an unusual British experimental two-stroke, 90-degree, V12, liquid-cooled aero-engine of 1,536 cu.in capacity, featuring sleeve valves and direct petrol injection. Initially intended for a high-speed "sprint" interceptor fighter, the Crecy was later seen as an economical high-altitude long-range powerplant. Developed between 1941 and 1946, it was among the most advanced two-stroke aero-engines ever built. The engine never reached flight trials and the project was cancel

Two-stroke petrol engines are preferred when mechanical simplicity, light weight, and high power-to-weight ratio are design priorities. With the traditional lubrication technique of mixing oil into the fuel, they also have the advantage of working in any orientation, as the oil reservoir is not dependent on gravity; this is an essential property for hand-held power tools such as chainsaws.

Two stroke motors are more efficient that four strokes for a few reasons. 1 is the displacement, they generally have smaller combustion chambers, which means less fuel burned. 2 is the fact that they have fewer moving parts, which decreases the constant load on the engine, allowing it to burn the air-fuel mixture more efficiently, and reach much higher revolutions per minute.

Theres no such thing as 2 stroke fuel. A 2 stroke engine uses regular gasoline to which you add a small amount of oil. The difference beteen 2 stroke and 4 stroke is a 2 stroke has no pressure oiling system so it has to be added to the fuel for cylinder lubrication. You cant run a 2 stroke engine long without added oil or it will seize.

A 2 stroke spark ignition cycle or 2 stroke petrol engine differs from a 4 stroke petrol engine by the way it generates power in the number of revolutions of the crankshaft. Unlike in a 4 stroke petrol engine, the 2 stroke spark ignition cycle produces power in each of its revolutions.
