Human augmentation is generally used to refer to technologies that enhance human productivity or capability, or that somehow add to the human body. Modern advancements in many areas of IT have led to a greater variety of implants and other technologies that could be classed as human augmentation. Human augmentation may also be called human 2.0.

What is Human Augmentation? - Definition from Techopedia

Let's design for the best of humanity and the best of technology. Augmented Reality (AR) blurs the boundary between the physical and digital worlds. In AR's current exploration phase, innovators are beginning to create compelling and contextually rich applications that enhance a user's

everyday experiences.

Augmented Human by Dr. Helen Papagiannis

The field of human augmentation (sometimes referred to as “Human 2.0”) focuses on creating cognitive and physical improvements as an integral part of the human body. An example is using active control systems to create limb prosthetics with characteristics that can exceed the highest natural human performance.

Definition of Human Augmentation - Gartner Information ...

Augmented Human Augmented human advances enable creation of cognitive and physical improvements as an integral part of the human body. An example of this is the ability to provide superhuman capabilities such as the creation of limb prosthetics with characteristics that can exceed the highest natural human performance.
